

Risks module - Customizing columns

The screenshot displays the Jira Risks module interface. The top section is a Kanban board with a vertical axis for 'PROBABILITY' (MEDIUM, HIGH, VERY HIGH). The board contains several risk cards, each with a key, status, summary, and consequence labels. Below the board is a table view of the risks, with columns for Issue Type, Key, Summary, Assignee, Status, Risk Probability, Risk Consequence, and actions (Edit, Delete). A 'Feedback' button is visible in the bottom right corner.

Customizing the risk register

The risks register can be customized by adding or removing Jira fields directly using the interface.
