5.2. Agile schedule

5.3. Board

5.4. Gantt

Data aggregation: Standard

Task mode

structure and /ay.

dependencies. Parent task s option may cause some unwanted changes like auto-shift of issues. [Read more](#)

Aggregation presets

There are four aggregation presets configured for different types of Projects and determine the [WBS and synchronization](#) of the Program and column configuration of task lists:

Data aggregation	Description
Standard	WBS will be based on project structure, versions structure and subtasks. Gantt columns will be set the waterfall-way.
Agile	WBS will be based on Epics. Gantt columns will be set the agile-way (Sprints, Epics, Story Points).
Automatic	WBS will be based on Project structure, Epics, versions structure, subtasks and components structure. Gantt columns will be focused on resources reporting and time tracking.
Manual	When Program is created, go to the Program Configuration and decide which settings are best for you.

Learn more about the [Gantt module](#) or go back to the [Program Wizard](#).
