ABOUT PRODUCT

Think you know Jira exporting limits? Think again. In Jira, there is only a single pre-determined export document style that also looks rather unattractive and is very hard to edit. BigTemplate lets you upload and assign different document styles to make Jira issues easily adaptable into different internal needs of an end-user company. Users can define their own document templates and assign them to tasks in different projects.

The screenshot shows a Jira issue page for 'Self-stored research' in the 'Agile Project - Large Team Board'. The issue is a Story with a priority of Low, assigned to Angela Hambleton, and is in the 'IN PROGRESS' status. The 'BigPicture - Work Breakdown Structure' section shows a hierarchy of tasks. On the right side, the 'BigTemplate' section is expanded, showing three export templates: 'Default' (XLSX, XLS, ODS), 'Leave' (PDF, DOC, DOCX), and 'On' (PDF, DOG). The 'Default' template is selected.

Easy to use

Open your issue. Select export. Choose a template. Save the file. That's it – ready to distribute, print, send over e-mail or instant messaging. Save your time!

Beautiful templates

Pre-defined templates made by an experienced User Experience superhero. No need to arrange the document from scratch, we did it for you.

Each of your JIRA issue fields is assigned to a specific style, which tells us how to format a given field value when you export. Use the list below as a point of reference to create and customize templates.

Customize it!

Edit the default ones or create great new stuff from scratch – whichever you choose, we give you the option to upload any number of custom templates
